

## **5.0 SUMMARY AND RECOMMENDATIONS**

No previously recorded precontact or historic period archaeological sites or historic properties potentially eligible for listing in the National Register of Historic Places are present within or adjacent to the two proposed S.R. 54 stormwater management areas. No precontact or historic period artifacts were recovered during the Phase I survey. Based on the lack of previously or newly recorded archaeological sites present, the proposed construction of the stormwater management areas, as currently designed, will not affect any archaeological resources, and no additional archaeological investigations are warranted.
